

Comparative Primatology Data Meeting

Data Collection, Storage, and Analysis

(May 27 - 28, 2014)

We are excited to host the first networking meeting of researchers who are tackling the challenges of data quality in primate comparative biology! The overarching goal of the meeting is to open a dialogue among the many different people who are working on comparative databases. We have overlapping interests in comparative data, yet different motivations and goals for using the data. Ultimately, we hope to find synergies among our efforts for collaboration that will help move our individual efforts forward.
